WORK EXPERIENCE

The Washington Post

Staff Software Engineer, Developer Experience

Aug 2025 - Present

- Led React 19, Sass, and Node upgrades across 100+ platform blocks and components
- Implemented automated visual regression testing with Playwright and Chromatic, integrated into a GitHub Actions deploy pipeline
- Shipped a Node.js/TypeScript CLI consolidating developer workflows across multiple product teams into single-command automation, reducing setup time and configuration errors

Senior Software Engineer

Apr 2022 - Aug 2025

- Owned component architecture and API design for a React block/component ecosystem of 70+ individually versioned npm packages, used across hundreds of client websites and hundreds of millions of monthly pageviews
- Designed and built a 3-layer design token pipeline (global primitives, semantic aliases, and breakpoint overrides) compiling JSON token definitions into production CSS across the design system
- Implemented ARIA attributes and RTL support via CSS logical properties throughout the component library

Software Engineer

Jun 2021 - Apr 2022

- Improved client site launch readiness through Core Web Vitals audits and performance optimization

IBM

Technical Consultant → Senior Technical Consultant

Sept 2017 - Jun 2021

- Designed interfaces and built React components for a U.S. Navy research analysis platform
- Wrote acceptance criteria, ran SQL-based system testing, and presented demos to DoD clients

PROJECTS

Figma Design Token Exporter

- Built an open-source Figma plugin that translates Figma Variables into Arc XP's design token bundle format, connecting design-system definitions to production token architecture

HYBRD

2024-2025

- Created wireframes and high-fidelity prototypes for a fitness app accepted into Y Combinator
- Built a React Native/TypeScript feature with a custom animation component, shipped in production

Parcel

- Built a working Chrome extension prototype for article micropayments with Google OAuth, real-time tab monitoring with dynamic icon states, wallet-based purchase flow, and a serverless AWS backend

EDUCATION

University of Virginia, School of Engineering

Graduated May 2017

Bachelor of Science in Systems Engineering, Bachelor of Arts in Economics

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript, HTML, CSS, accessibility

Design: Design tokens, Figma, Storybook, Chromatic, Adobe Illustrator, wireframing/prototyping
