WORK EXPERIENCE

The Washington Post

Staff Software Engineer

Aug 2025 - Present

- Built an LLM-driven code generation workflow in AWS Bedrock and Lambda that translated structured inputs into five production-ready UI artifact types in under a minute
- Shipped a Node.js/TypeScript developer CLI, consolidating common workflows into single-command automation and reducing manual, error-prone setup
- Extended a core Draft API to support new content models and more flexible publishing workflows while preserving consistency for downstream consumers
- Led modernization of a large React/Node surface area (100+ blocks/components) to React 19

Senior Software Engineer

Apr 2022 - Aug 2025

- Owned a React block/component ecosystem (70+ npm packages), including the admin UI used to manage site properties and configuration. These libraries were used across hundreds of client websites, and received hundreds of millions of pageviews
- Built tooling to compile token-based JSON design files into production CSS, improving consistency between design-system definitions and implementation
- Automated environment provisioning by moving from local scripts to event-driven AWS workflows, cutting E2E setup time from hours to minutes and enabling safe concurrent provisioning at scale

Software Engineer

Jun 2021 - Apr 2022

- Resolved 275+ cross-product technical issues for 12+ clients and completed launch gate reviews for 7 site launches, identifying a launch-blocking issue before release

IBM

Senior Technical Consultant

Oct 2019 - Jun 2021

- Designed interfaces and built React components for a U.S. Navy research analysis platform used to support exploration of complex document and research workflows

Technical Consultant

Sept 2017 - Oct 2019

- Wrote acceptance criteria, performed system testing using SQL, and presented demos to DoD clients

PROJECTS

HYBRD

2024-2025

- Created wireframes and high-fidelity prototypes for a fitness app accepted into Y Combinator

EDUCATION

University of Virginia, School of Engineering

Graduated May 2017

Bachelor of Science in Systems Engineering, Bachelor of Arts in Economics

TECHNICAL SKILLS

Core: TypeScript/JavaScript, Node.js, React, HTML, CSS

Design/UX: Figma, design systems, design tokens, prototyping, wireframing, Adobe Illustrator

Cloud/DevOps: AWS (Lambda/IAM/S3/CloudFormation), Docker, GitHub Actions

Tooling/AI: CLI development, npm, AWS Bedrock
